

Westminster Waste Confirms Bin Weighing Standard On Fleet

London-based Westminster Waste Ltd has just ordered its third refuse collection vehicle (RCV) equipped with bin-weighing equipment to enhance its Pay By Weight service. In future bin weighing technology will be part of the standard specification for all new vehicles on the company's fleet.

Westminster Waste took delivery of its first RCV last year, a Euro 6 DAF CF 440 FAX 8x2 chassis fitted with the ENVIROWEIGH bin-weighing system from Vehicle Weighing Solutions Ltd (VWS). Known for its high level of accuracy ENVIROWEIGH is also weights & measures approved so it can be used for Pay By Weight services. A second 'bin-weighing ready' vehicle was purchased soon after as part of the company's ongoing vehicle replacement programme to upgrade the fleet with the latest Euro 6 compliant trucks.

Dave Tucker, Director, Westminster Waste Ltd commented: "The VWS bin-weighing system allows us to monitor the weight data for every bin, we can easily upload the information on to our back office system allowing us to quickly present accurate weight information to our customers. We have found the VWS equipment to be consistent and very reliable."

"We have found the VWS equipment to be consistent and very reliable."

Dave Tucker, Westminster Waste Ltd Director

ENVIROWEIGH integrates with vehicle CCTV and telemetry systems, to enable remote monitoring and for the collection of data. It provides a real-time solution to such issues as uncollected bin queries and re-routing the truck for an urgent collection.

Julian Glasspole, Managing Director, VWS said: "it's great news that our ENVIROWEIGH bin-weigher is having such a positive effect on Westminster Waste's business, so much so it is now standard issue on new vehicles. This reinforces our belief that it is the best system available, backed up with excellent after sales support."

ENVIROWEIGH can also be used in conjunction with PurGo software for a fully integrated bin-weighing solution. PurGo has been designed specifically for waste management operators to streamline processes from Sales through to Operations including route scheduling, admin, billing and reporting, and uses technology such as in-cab PDAs.
